

## Bridge 37.3 Replacement

### Project Description

The Alaska Railroad Corporation (ARRC) is proposing the rehabilitation of the bridge located at milepost (MP) 37.3, which crosses Trail Creek, a few miles north-east of Moose Pass, Alaska. The existing 5-span timber open deck bridge will be replaced with a 2-span steel ballast deck, new foundation and sheet pile abutments.

### Purpose and Need

The project will replace a bridge which is reaching the end of its useful life span. The purpose of this project is to enhance the stability of the track infrastructure, protect critical state infrastructure, improve safety for the ARRC and its customers, including passengers, and maintain the integrity of the railroad.

### Status

- Preliminary Engineering and Environmental review is underway.

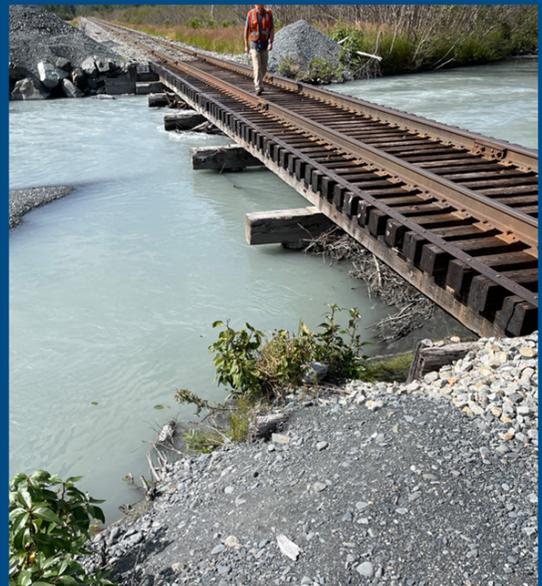

- Upon National Environmental Policy Act (NEPA) approval, final design and permitting will be completed; then ARRC will solicit a construction contractor to complete the work.
- Construction is anticipated to begin in 2027.
- Project completion is expected by 2028.

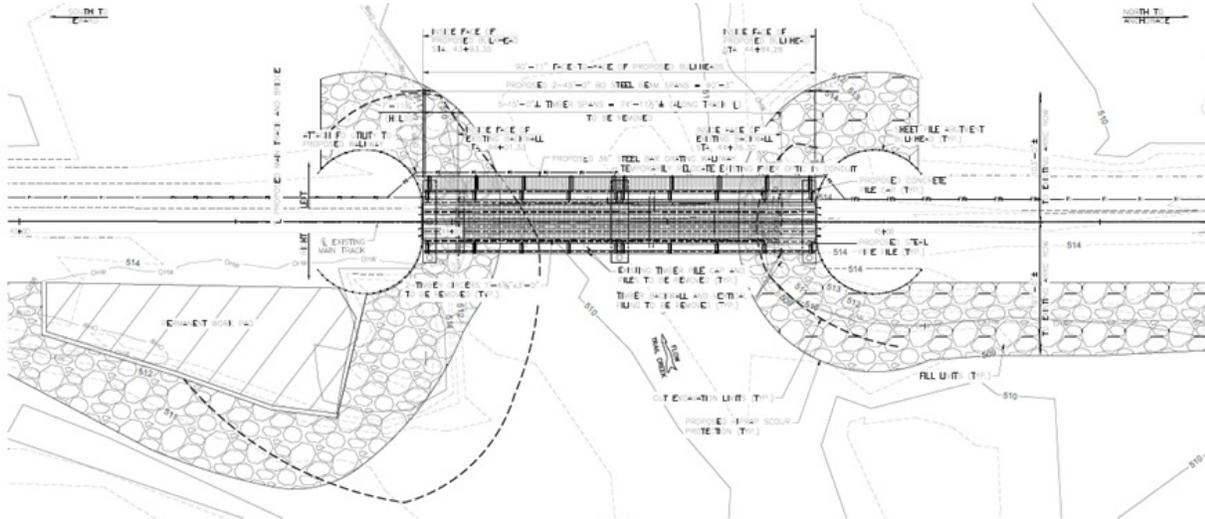

### Funding

The project is expected to be funded by the Federal Transit Administration (FTA) with a 20% match by ARRC..

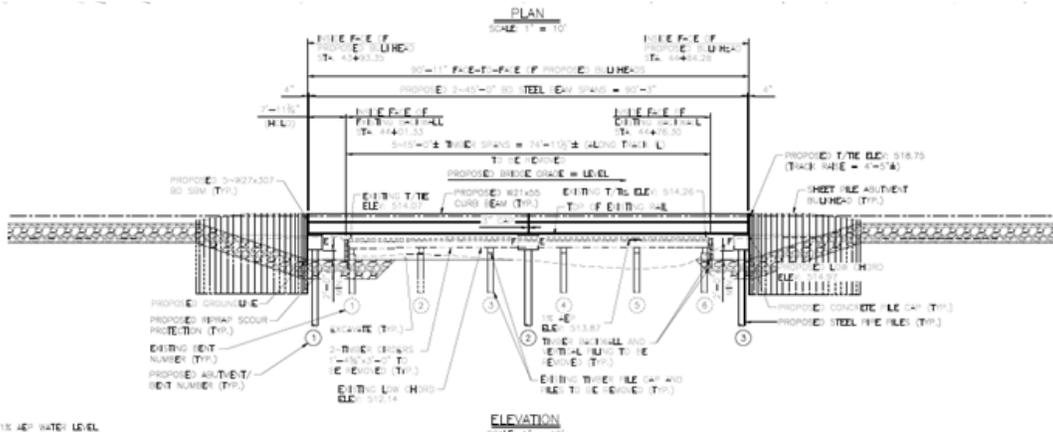

### More Information

For more information or comment, email the Alaska Railroad at [Public\\_Comment@akrr.com](mailto:Public_Comment@akrr.com). The ARRC Bridge Program fact sheet is available online at [AlaskaRailroad.com](http://AlaskaRailroad.com) > Corporate > Projects (look under *Systemwide Projects*).
